

Grid Computing for Industry: Early Applications

Hing-Yan LEE

National Grid Office, Singapore

hingyan@ngp.org.sg

The mission of the National Grid Office is to "facilitate the seamless use of an integrated cyber infrastructure in a secure, effective and efficient manner to advance scientific, engineering and biomedical R&D, with the longer term goal of transforming the Singapore economy using grid."

This presentation will focus on the second goal. We will share the initiatives towards achieving the adoption of Grid Computing by industry and business users. While there have been some initial successes, there are also challenges and issues encountered along the way.
