

The Design of ASnet and the support to Grid

Yu-Ling CHANG

Academia Sinica, Taiwan.

ASnet is an advanced academic services network to support research and education activities. Without compromise between stability, flexibility and utilization, ASnet invested lots of resources to establish the infrastructure by using dark fibers, leased lambdas, and high availability equipments in past years.

This presentation will cover the design concept, current and the forecast of ASnet. Also this talk will cover how the advantages and services from ASnet can help researchers process Grid projects to achieve expected qualities on data communications.
