

## **Security Policies for Interoperable Grids**

David Kelsey

STFC/Rutherford Appleton Laboratory, UK

d.p.kelsey@rl.ac.uk

The Joint Security Policy Group (JSPG) has produced security policies for several Grid infrastructures, including EGEE, OSG, WLCG, and some national Grids in Europe. The aim is to make these as general and simple as possible so as to encourage interoperability, particularly for Virtual Organisations using resources from more than one Grid. The recent work of JSPG will be presented together with ideas for tackling the scalability problems of growing numbers of Virtual Organisations and national Grids.
