

Grid Services Ecosystem

Hing Yan, Lee

IDA, Singapore

In June 2008, three commercial grid service providers were appointed to commence provisioning of software, hardware, and storage on a utility basis to users from government, enterprises to small-and-medium sized businesses and individuals. We also establish a SaaS Incubation Centre to provide business and technical consultancy as well as a platform for software ISVs to SaaS-enable their applications. Upon graduation, these SaaS software will be hosted by one of the three grid service providers.

This talk will share about the progress made since general availability in November 2008 and the efforts to promote adoption.
