

EGEE Operational Security

Ma Ming Chao

STFC - Rutherford Appleton Laboratory, United Kingdom

The EGEE Operational Security Coordination Team (OSCT) provides an operational response to security threats against the EGEE infrastructure. They are providing support for daily security operations as part of an on-duty rota. It mainly focuses on computer security incidents handling, by providing reporting channels, pan-regional coordination and support. It also deals with security monitoring on the Grid and provides best practice, advice and security training to Grid system administrators. An brief overview of work done by the team will be given. Some recent activities in OSCT including the new revised incident response procedure (draft), collaboration with other Grids and security training and dissemination will also be presented
